SUMMARY

Full-Stack Developer (graduating 2026) with 3+ years of hands-on experience building production web applications using React, Next.js and TypeScript. Familiar in Python and C++, with solid grounding in data structures, algorithms, OOP, SOLID and design patters principles from academic coursework and independent projects. Experienced working with relational databases (PostgreSQL, MySQL) and writing efficient queries, with Git/GitHub. Comfortable across the stack — from React/Tailwind front ends to Python backend and systems-level logic — and quick to pick up new tools in fast-paced, collaborative environments.

EDUCATION

Faculty of Computers and Information, Minia University — BS in Computer Science *2026 (Expected)*

- GPA: 3.18 (Very Good)
- Relevant Coursework: Data Structures and Algorithms, SOLID Principles, OOP, Design Patterns, Software Engineering, Databases

SKILLS

Programming Languages: Python, C++, TypeScript, JavaScript, Java, C#

Frontend: React.js, Next.js, HTML, CSS, Tailwind CSS, Bootstrap

Backend & Databases: Node.js, Next.js, REST APIs, PostgreSQL, MySQL, Prisma ORM

Machine Learning & AI (Self-Directed): PyTorch, TensorFlow, Scikit-learn, OpenCV, NLP

EXPERIENCE

Full-Stack Developer, Freelance Projects — (Remote) *2022 – 2025*

- Delivered multiple full-stack web applications for clients, including e-commerce and business management systems, using React, Next.js, and Tailwind CSS with a focus on workflow automation and responsive UI development.
- Designed and managed relational database schemas (PostgreSQL, MySQL) and implemented REST APIs to handle application data efficiently.
- Collaborated directly with clients to gather requirements, debug issues, and iterate on features — writing clean, maintainable, well-documented code.

MEARN Stack Summer Training, (ITI) *View Certificate 23 Jul 2023 – 24 Aug 2023*

- Developed responsive web applications through hands-on projects using HTML, CSS, JavaScript, TypeScript, MongoDB, and React, applying modern development practices, reusable components, and client-server integration.

PHP Development Stack Summer Training, (ITI) *View Certificate 13 Jul 2025 – 1 Sep 2025*

- Built dynamic web applications through hands-on projects using PHP, MySQL, and WordPress, gaining experience in database design, SQL queries, CRUD operations, authentication, form handling, and server-side web development.

Machine Learning Internship, (NTI) *View Certificate 6 Aug 2024 – 12 Sep 2024*

- Applied Python (Pandas, Scikit-learn) for feature engineering and model evaluation across multiple algorithms (Decision Tree, Random Forest, Logistic Regression, Naive Bayes), reinforcing data-handling and problem-solving skills applicable to backend/data-driven systems.

PROJECTS

Vision X – AI-Powered Smart Glasses for Blind Users (Graduation Project) ***(Role: AI Engineer)***

- Led the AI development by building and optimizing computer vision and deep learning models for object detection, OCR, currency recognition, and voice-guided assistance.
- Collaborated with teammates to integrate AI models with Raspberry Pi, sensors, and embedded hardware for real-time assistive functionality.

Learning Management System (LMS) *GitHub* · *Live Demo*

- Built a full-stack LMS supporting course creation, enrollment, content management, subscriptions, and progress tracking with role-based access control for admins, instructors, and students.
- Technologies: Next.js, React, Tailwind CSS, NextAuth, Prisma ORM, PostgreSQL (Neon), Stripe, REST APIs

Atfallna Children's Toy Store (Freelance) *GitHub*

- Developed a full-stack e-commerce platform with customer-facing storefront and an admin dashboard for managing products, inventory, users, and orders.
- Technologies: Next.js, TypeScript, Tailwind CSS, PostgreSQL, Prisma ORM, Neon Database, NextAuth, REST APIs

To-Do List Application *GitHub* · *Live Demo*

- Built a full-stack task management app with CRUD functionality, user authentication, and persistent cloud storage through an intuitive interface.
- Technologies: Next.js, TypeScript, Tailwind CSS, PostgreSQL, Prisma ORM, Neon, Authentication

E-commerce Application *GitHub* · *Live Demo*

- Built a responsive front-end clothing store allowing users to browse products, explore collections, view product details, and manage their shopping cart.
- Technologies: React (Vite), Tailwind CSS, JavaScript

C++ File Organizer *GitHub*

- Developed a C++ application that automatically organizes files into folders based on file extension and filename length, improving file management and accessibility.
- Technologies: C++

Queue Simulation System *GitHub* · *Live Demo*

- Developed a queue simulation system modeling cashier operations, tracking customer waiting times, monitoring queue lengths, and evaluating service efficiency.
- Technologies: HTML, CSS, JavaScript

Asthma Prediction (Machine Learning)

- Enhanced a machine learning model to classify asthma cases as stable or unstable using clinical data and algorithms including Decision Tree, Random Forest, Logistic Regression, and Naive Bayes.
- Technologies: Python, Pandas, Scikit-learn
